

Self-Fusing Fire Proofing Tape

Product Introduction:

An arc and fireproofing tape designed to protect power or telecommunication cables. When exposed to flame, the tape wrapped around the cable jackets can quickly form a charring layer of anti-oxidative thermal insulation which effectively prevents combustion. The tape is extremely important to eliminate hidden dangers, ensure safe operation of the power transmission and distribution and telecommunication lines.

Size:

38mm x 0.76mm x 6m

Features:

- Excellent fire and arc resistance
- Good self-adhesion
- Non-toxic, odorless and pollution-free
- No effect on current-carrying capacity

Applications:

- Fire-proofing for high and low-voltage supply lines
- Fire-proofing for power cables of transformer substations, subways, tunnels, chemical or mining industries, buildings etc
- Other situations requiring fire-proof

Part Number	TEPR770
