Cable Gland Shrouds

Push on shrouds which are used to minimize the risk of dirt or foreign substances gathering on the cable gland body, and/or point of cable to a gland interface.

For all types of gland applications to provide additional protection and enhances the IP rating of the gland termination.

Long and Short both available

Shrouds provide an effective solution to weather and rust protection to cable glands and improve IP rating of the cable gland termination. So it is use to provide additional protection against cable glands and minimize the risk of dust or overseas substance gathering on the cable gland body. It is highly reliable and available in different size to compatible with cable glands so it can easily used

All glands use high quality neoprene seals that retain their tension and are resistant to oil, chemicals and flame making them the best choice for hazardous applications
